## MASTERLOAD PRESENTATION

Loading and Stability Software

API Marine ApS | Troensevej 12 | DK-9220 Aalborg Oest | Denmark  
Tel.: +45 9634 5070 | [info@api-marine.com](mailto:info@api-marine.com) | [www.api-marine.com](http://www.api-marine.com)

# Masterload™

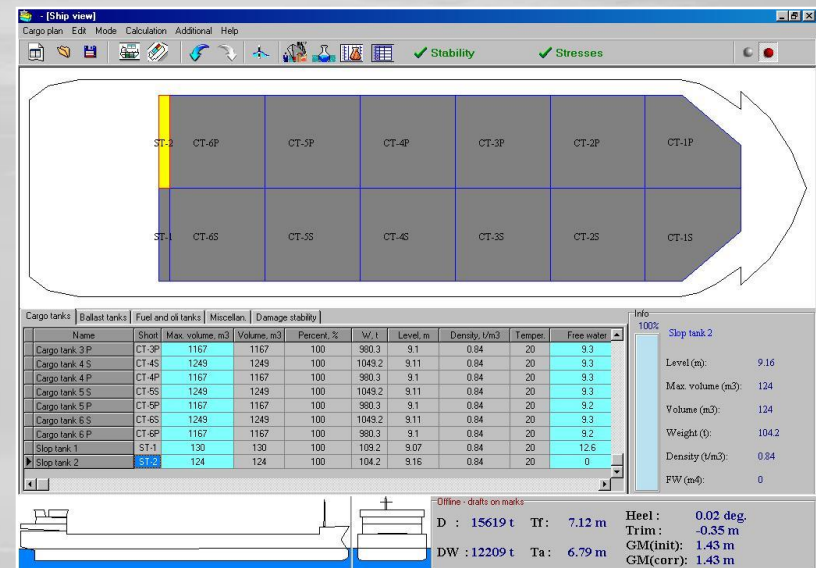

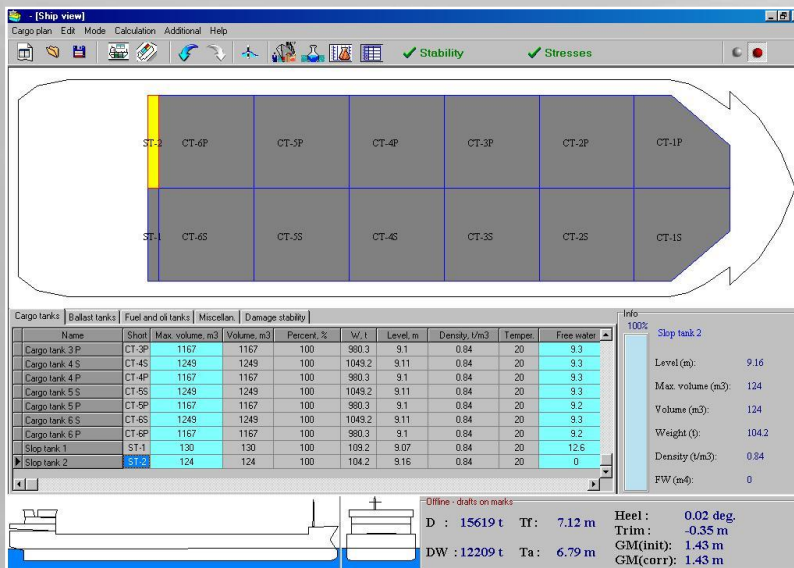

The Loading Computer SW - MasterLoad™ - is designed for cargo planning, keeping carried cargoes, updating the state of carried cargoes during the voyage, calculating the weight, drafts, parameters stability, and strength.

MasterLoad™ can be used with or without level sensors in cargo, ballast and other tanks for “off-line” and/or “on-line” calculations.

# Tanker

The first window includes the main menu, sections, the location of the real waterline and brief information about the heel, drafts, displacement and some stability criteria.

# Tanker

The main menu is used for program administration.

If you choose “Tanks”, you can design tank tables, fill in or make dry ballast, cargo, fuel and store tanks in the interactive mode.

Cargo tanks	Ballast tanks	Fuel and oil tanks	Miscellan.	Damage stability				
Name	Short	Max. volume, m3	Volume, m3	Percent, %	W, t	Level, m	Density, t/m3	Free water

OK

# Tanker

Information about cargo  
distribution, stores, ballast, etc.  
can be shown in drawing or text  
mode.

Stability criteria are in line with  
IMO criteria.

# Tanker

If it is necessary to calculate the complicated floating object strength it is possible to use the elements method and additionally to calculate the roll.

# Online Mode

✓ Select all tanks

✓ Cargo tanks

✓ Ballast tanks

✓ Fuel and oil tanks

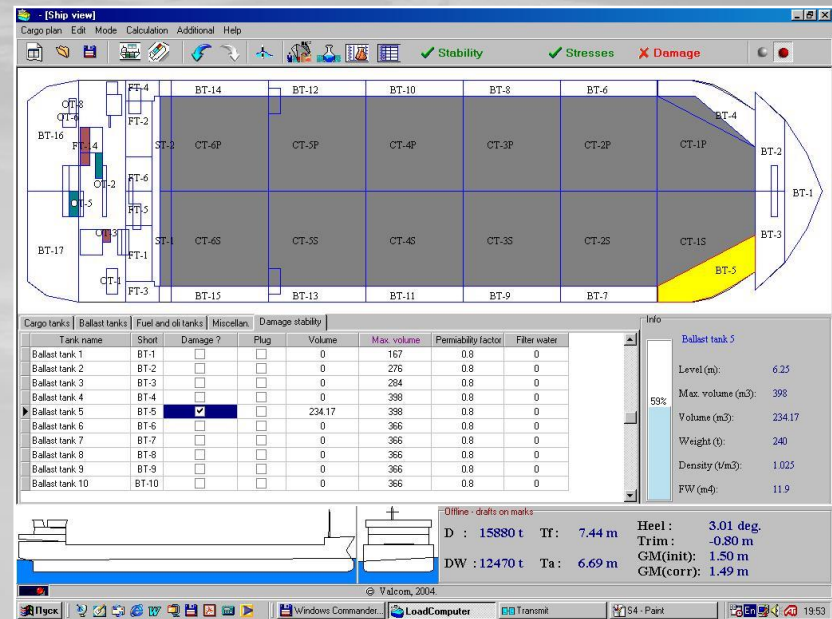

✓ Miscelan.

✗ Unselect all tanks

# Damage Stability

The vessel is analytically damaged by opening various combinations of watertight compartments to the sea. The number of compartments and their location are dictated by IMO regulations, SOLAS conventions, or other applicable rules.

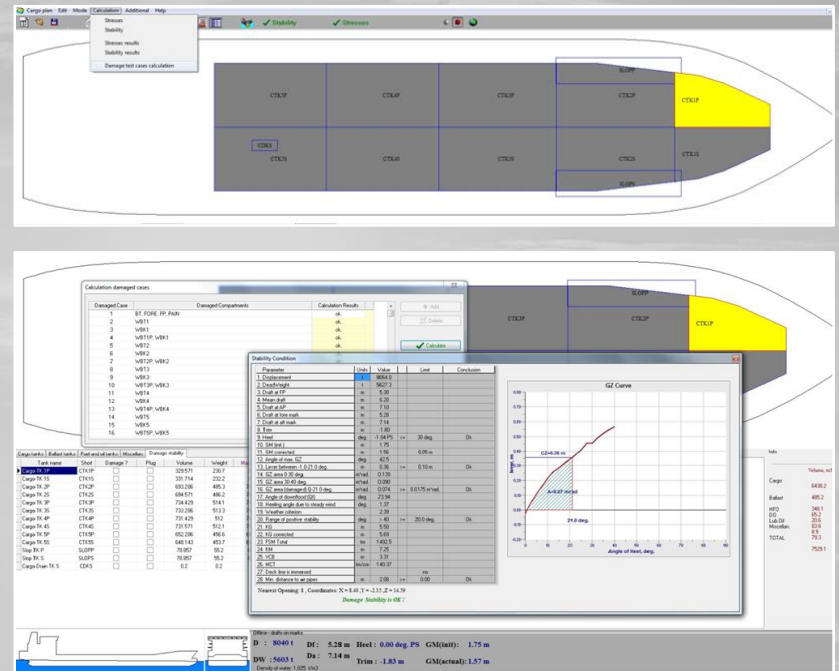

Typically these conditions are identified by the compartment(s) damaged ex: "Water Ballast Tank 5 Stb"

# Damage Stability

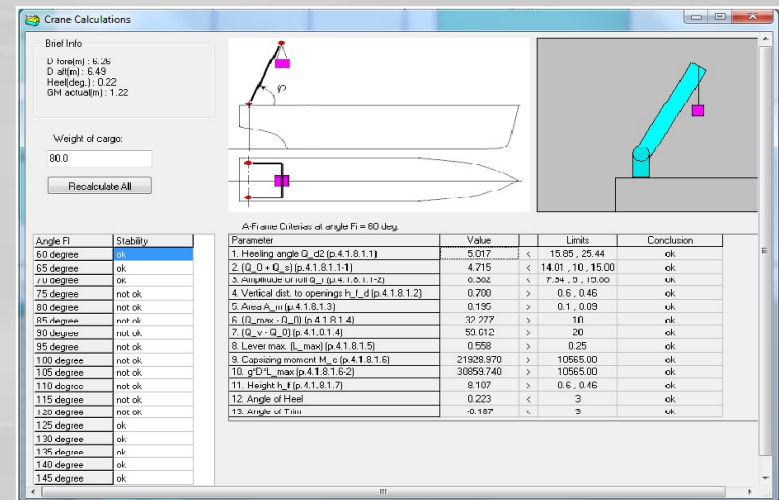

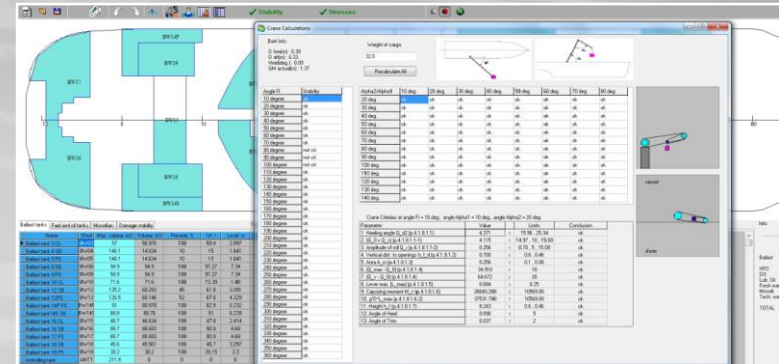

Damage Stability calculation is provided according MARPOL 73/78, resolution MEPC 248(66).

All loading could be checked for all damage test cases described in a Damage Stability booklet

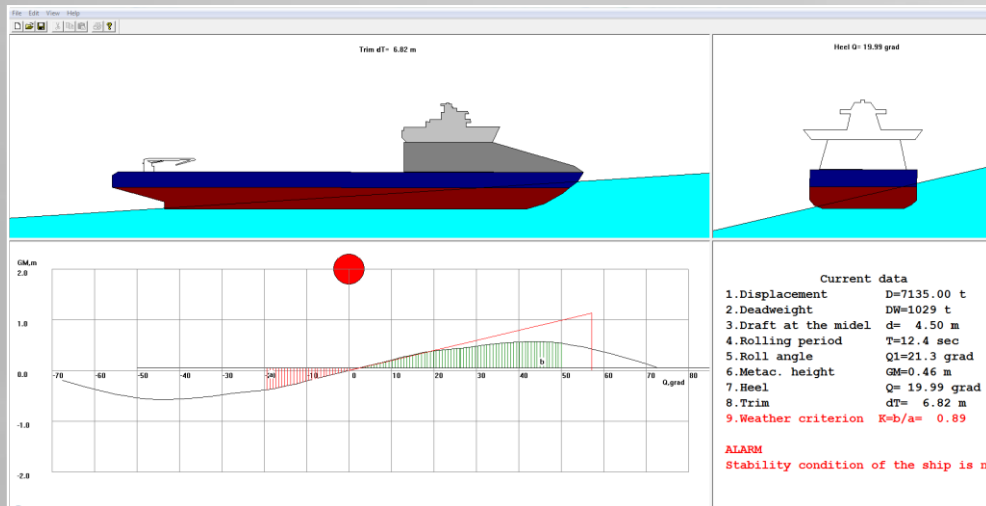

# Damage Stability

There are some special functions to calculate a possibilities for the crane and A-frame operation

# Additional Possibilities

The dynamic stability calculation shows how much the loads reduce the stability safety while working (the area under the curve). Every lift is only as safe as the load lifted, the condition of the vessel at that time and the sea-state size and direction

# New Requirements

New Requirements for Tankers as per January 2016 for Stability  
Calculation

MARPOL ANNEX I Regulations 28/6  
and

MARPOL 73/78, resolution Marine  
Environment Protection Committee  
MEPC.248(66)

# Information Needed

## Intact and damage stability calculation

- Hull drawing
- General arrangement
- Capacity plan
- Tanks and compartments tables
- Additional cargoes

## Strength calculation

- Light weight distribution
- Bending Moment & Shear Force Limits

## Stability Booklet

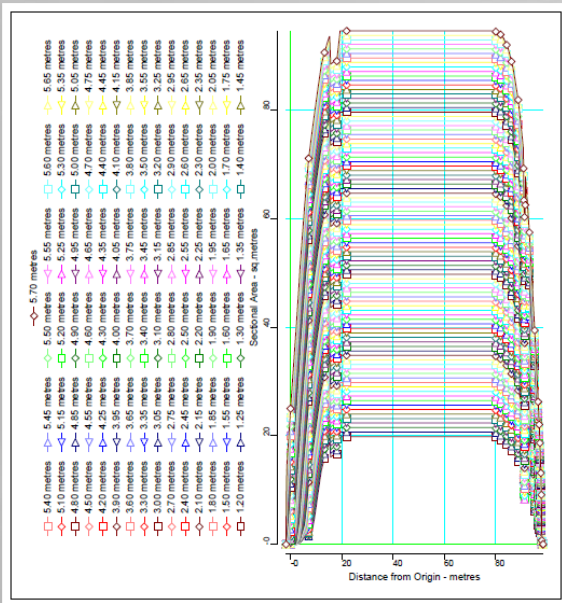

# Hull

## Lines (Body) Drawing (AutoCAD format)

# Alternative Information to Create a Hull Drawing

- Bonjan (Section area curvers)
- Hydrostatic curves Or NAPA.db file
